

The background features abstract, overlapping green geometric shapes, primarily triangles and polygons, in various shades of green, creating a modern and dynamic visual effect.

# CS 35L

## Software Construction Laboratory

Lecture 1

8<sup>th</sup> January, 2019

# What's this class about?

- ▶ “Fundamentals of commonly used **software tools** and environments, particularly **open-source** tools to be used in upper division computer science courses.”

# What is open source software?

- ▶ Source code is publicly available
- ▶ Anyone is allowed to modify the source code
- ▶ Examples
  - ▶ Firefox
  - ▶ Android
  - ▶ Apache

# GNU/Linux

- ▶ **Kernel:** core of OS
  - ▶ Allocates time and memory to programs
  - ▶ Handles file system and communication between software and hardware
- ▶ **Shell:** interface between user and kernel
  - ▶ Interprets commands user types in
  - ▶ Takes necessary action to cause commands to be carried out
- ▶ **Programs**

# Linux vs. Unix

## Linux

- ▶ Linux was made by a student called Linus Torvalds in 1991
- ▶ Mostly Free
- ▶ Open Source
- ▶ Linux can be installed on a variety of computer hardware

## Unix

- ▶ Unix was first developed for multi-user and multi-tasking in mid-1970's in BELL Labs by AT&T, GE and MIT
- ▶ Unix is mostly used by Sun as Solaris, HP-UX, AIX, etc
- ▶ Unix supports fewer file systems compared to Linux

# Which Linux for this course?

## Ubuntu Most popular

- ▶ Frequently updated, fixed release cycle (6 months)

## Seas net servers(recommended):

- ▶ `lnxsrv.seas.ucla.edu` (*lnxsrv06, lnxsrv07, or lnxsrv09*)
- ▶ Username: SEAS ID
- ▶ Password: SEAS password
- ▶ On Windows: putty
- ▶ On Mac: terminal (<https://www.seasnet.ucla.edu/lnxsrv/>)

# Command Line Interface vs. Graphical User Interface

## CLI

- ▶ Steep learning curve
- ▶ Pure control (e.g., scripting)
- ▶ Cumbersome multitasking
- ▶ Convenient remote access

## GUI

- ▶ Intuitive
- ▶ Limited control
- ▶ Easy multitasking
- ▶ Bulky remote access

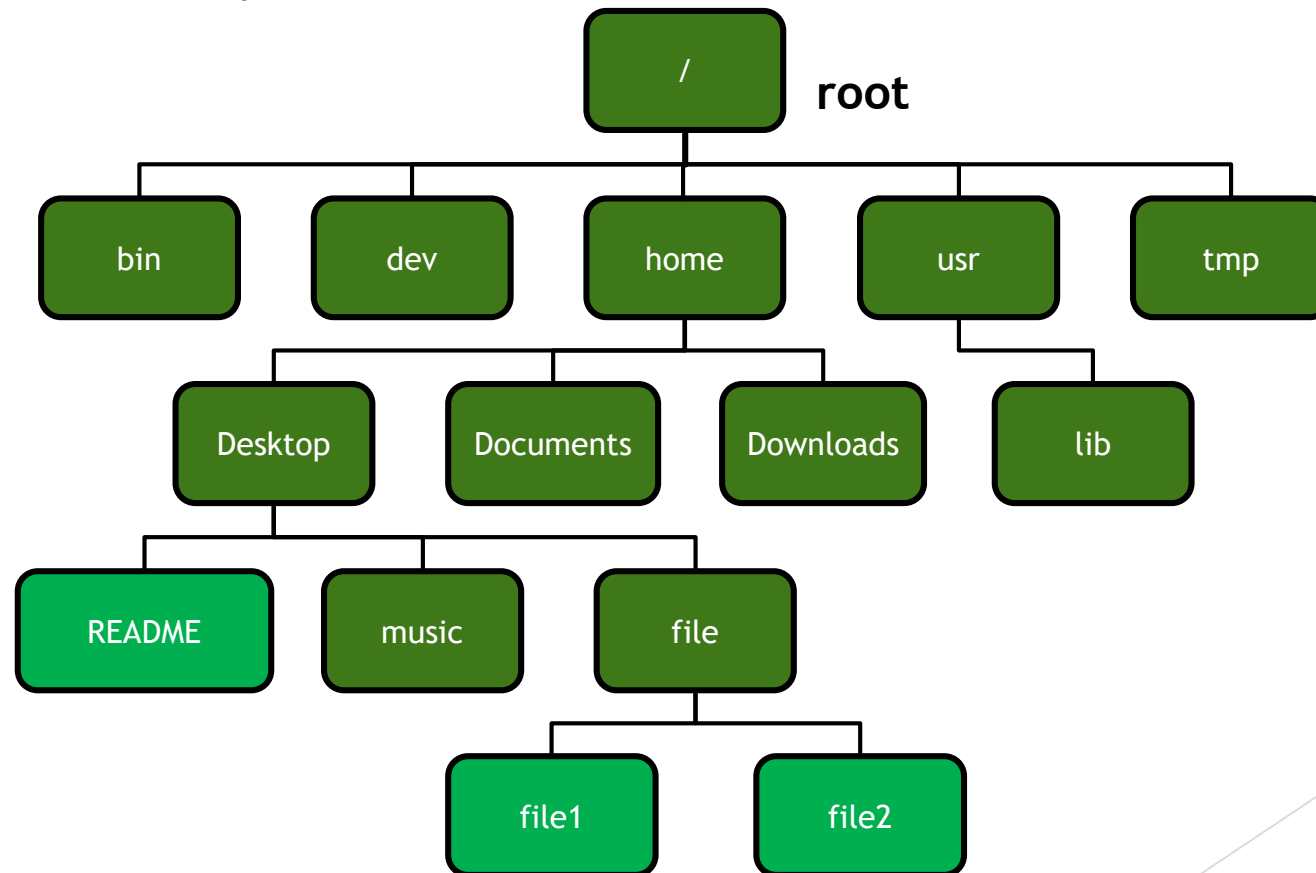

# Files and Processes

- ▶ Everything is either a **process** or a **file**:
  - ▶ **Process**: an executing program identified by PID
  - ▶ **File**: collection of data
    - ▶ A document
    - ▶ Text of program written in high-level language
    - ▶ Executable
    - ▶ Directory
    - ▶ Devices

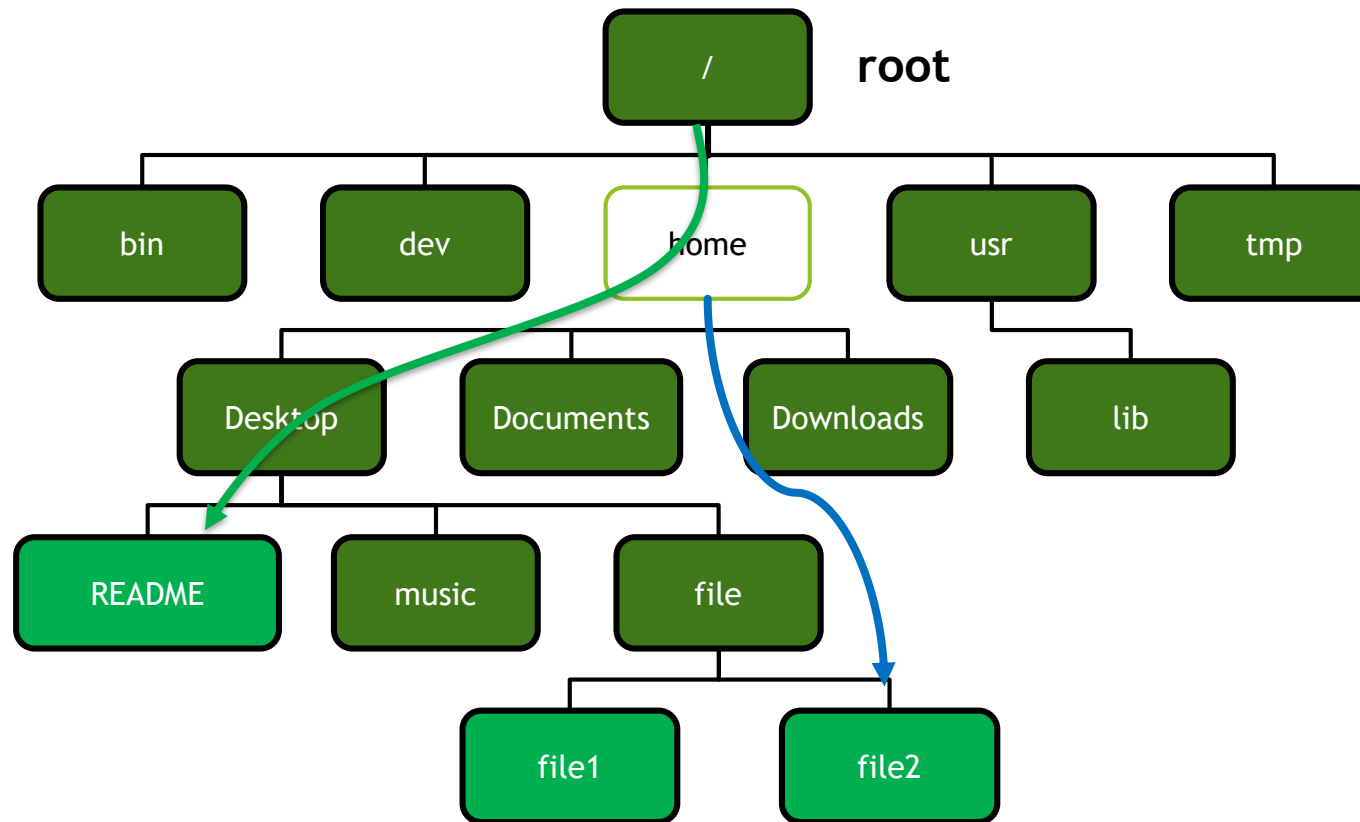

# Linux File System Layout

- Tree structured hierarchy

# Absolute Path vs. Relative Path

Current directory: home

# The Basics: Moving Around

- ▶ **pwd:** print working directory
- ▶ **cd:** change directory
  - ▶ ~ home directory
  - ▶ . current directory
  - ▶ / root directory, or directory separator
  - ▶ .. parent directory

# The Basics: Shell

- ▶ **<up arrow>**: previous command
- ▶ **<tab>**: auto-complete
- ▶ **!!**: replace with previous command
- ▶ **!! [str]**: append previous command with str

# man

- ▶ Extensive documentation that comes preinstalled with almost all substantial Unix and Unix-like operating systems
- ▶ Usage:
  - ▶ read a manual page for a Linux command
    - ▶ `man <command_name>`
    - ▶ Hit “q” to get out of man page
    - ▶ Try
      - ▶ `man ls`
      - ▶ `man cd`
      - ▶ `man man`

# The Basics: Dealing with Files

- ▶ **mv**: move/rename a file
- ▶ **cp**: copy a file
- ▶ **rm**: remove a file
  - ▶ **r**: remove directories and their contents recursively
  - ▶ Careful! This command deletes file permanently!
- ▶ **mkdir**: make a directory
- ▶ **rmdir**: remove an empty directory
- ▶ **ls**: list contents of a directory
  - ▶ **a**: list all files including hidden ones
  - ▶ **l**: show long listing including permission info
  - ▶ **s**: show size of each file, in blocks

# The Link Command

- ▶ **ln**: create a link
- ▶ Symbolic Link
  - ▶ `ln -s <filename> <linkname>`
- ▶ Hard Links
  - ▶ Hard links: point to physical data/inode
  - ▶ `ln -T <filename> <linkname>`
- ▶ Example

# Redirection Operators

- ▶ `> file`
  - ▶ Writes stdout to a file
- ▶ `>> file`
  - ▶ Appends stdout to a file
- ▶ `< file`
  - ▶ Use contents of a file as stdin

# Linux File Permissions

```
shum@sol:~$ ls -l
total 20
drwx----- 2 shum staff 4096 Jan 16 22:04 Mail
drwx----- 3 shum staff 4096 Jan 16 14:15 csc128
drwxr-xr-x  2 shum staff 4096 Jan 13 16:42 public
drwxr-xr-x  2 shum staff 4096 Jan 16 14:07 public_html
-rw-r--r--  1 shum staff 628 Jan 15 20:04 verse
```

file type

number of hard links

user (owner) name

group name

size

date/time last modified

filename

other (everyone) permissions

group permissions

user permissions

rwx

executable

writeable

readable

# Linux File Permissions

- ▶ `chmod`
  - ▶ read (r), write (w), executable (x)
  - ▶ User, group, others

Reference	Class	Description
u	user	the owner of the file
g	group	users who are members of the file's group
o	others	users who are not the owner of the file or members of the group
a	all	all three of the above, is the same as <i>ugo</i>

# The Basics: chmod (symbolic)

Operator	Description
+	adds the specified modes to the specified classes
-	removes the specified modes from the specified classes
=	the modes specified are to be made the exact modes for the specified classes

Mode	Name	Description
r	read	read a file or list a directory's contents
w	write	write to a file or directory
x	execute	execute a file or recurse a directory tree

# The Basics: chmod (numeric)

#	Permission
7	full
6	read and write
5	read and execute
4	read only
3	write and execute
2	write only
1	execute only
0	none

- Usage
  - `chmod ["references"]["operator"]["modes"] "file1" ...`
  - Example: `chmod ug+rw mydir`, `chmod a-w myfile`,
  - Example: `chmod ug=rx mydir`, `chmod 664 myfile`

# The Basics: find

- ▶ -type: type of file (e.g: directory, symbolic link)
- ▶ -perm: permission of file
- ▶ -name: name of file
- ▶ -user: owner of file
- ▶ -maxdepth: how many levels below to go into

# The Wildcards

- ▶ `?:` matches any single character in a filename
- ▶ `*:` matches one or more characters in a filename
- ▶ `[]:` matches any one of the characters between the brackets. Use '-' to separate a range of consecutive characters.

# find Examples

## ► Examples

- `find ~/Documents -name "*.txt"`
- `find . -name "a?.txt"`
- `find . -name "[abc]1.txt"`
- `find ~/ -type f -name a*`

# wh... Commands

- ▶ `what is <command>`: returns Name section of man page
- ▶ `where is <command>`: locates the binary, source, and manual page files for a command
- ▶ `which <command>`: locates the binary for a command

# Look these up:

- ▶ cat
- ▶ echo
- ▶ head
- ▶ tail
- ▶ ps
- ▶ kill
- ▶ sort

# Connecting to SEAS from OS X or Linux

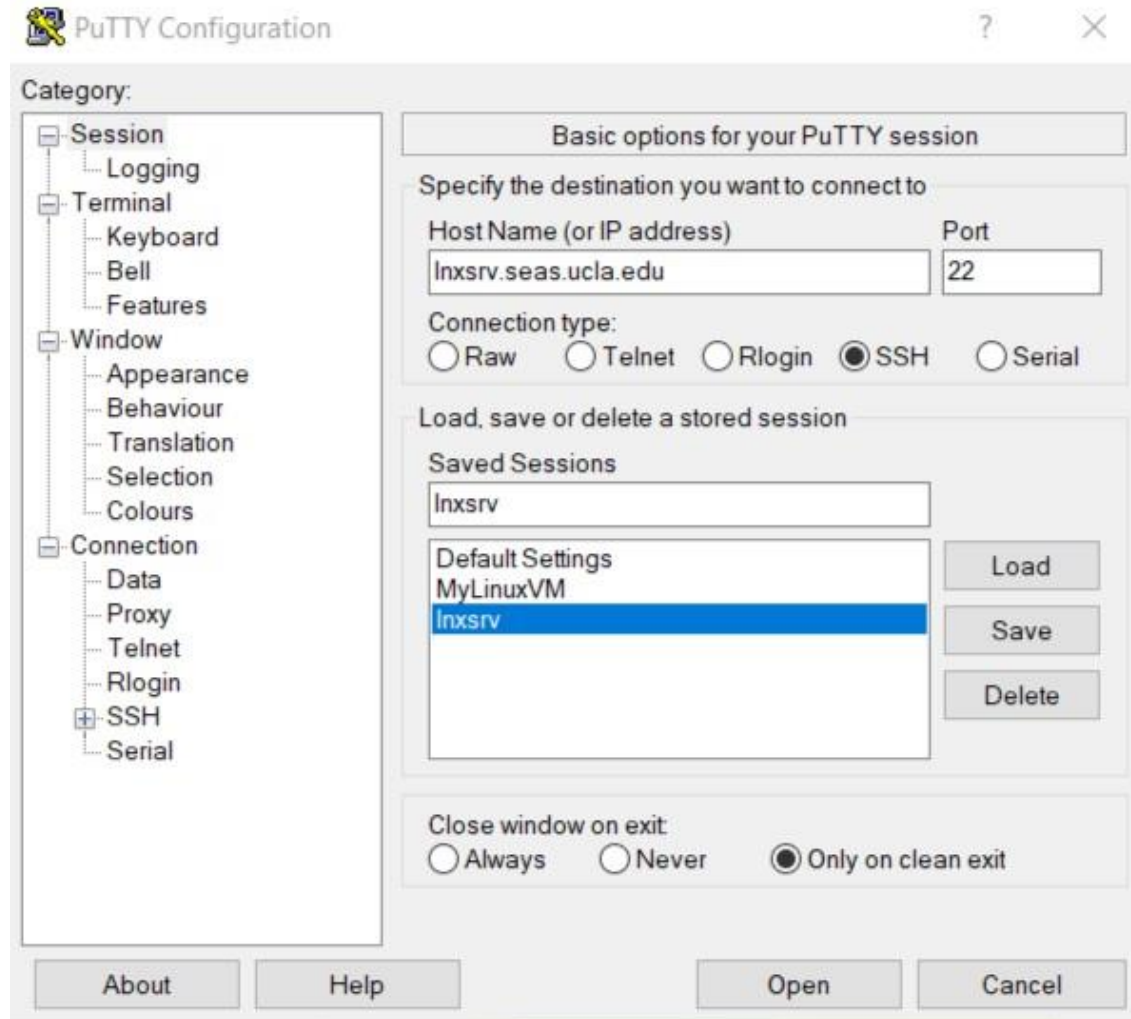

- ▶ Terminal

- ▶ \$ ssh username@lnxsrv.seas.ucla.edu
- ▶ Username = your SEAS user name

# Connecting to SEAS from Windows

- ▶ Putty
  - ▶ Recommended
  - ▶ Small and easy to use
  - ▶ Host name: `lnxsrv.seas.ucla.edu`
  - ▶ User name: your SEAS user name

# PuTTY

# Assignment 1 Tips

- ▶ ans1.txt is specifically for LABORATORY section
- ▶ Format of the answers should be as shown below:
  - ▶ 1. Here is the command to solve question 1
    - ▶ Short description of the command used above
  - ▶ 2. Here is the command to solve question 2
    - ▶ Short description of the command used above
  - ▶ 3. Here is the command to solve question 3
    - ▶ Short description of the command used above

# Assignment 1 Tips

- ▶ key1.txt is specifically for HOMEWORK section
- ▶ Format of the answers should be as shown below:
  - ▶ 1.1
    - ▶ 1. C-x s c a v M-x
    - ▶ 2. C-f e n g r C-e
  - ▶ 1.2
    - ▶ 1. C-x s c a v M-x
    - ▶ 2. C-a e n g r C-e
- ▶ No description of commands required in the HOMEWORK section
- ▶ **Kindly upload both ans1.txt and key1.txt on CCLE**
